

Phoenix Suns Fan Revenue & Strategy Intelligence Report

Ticketing, Attendance, Fan Segmentation, and Commercial Opportunities

Tejas Bhanushali

MS Data Science, Analytics and Engineering, Arizona State University

Simulated 41 game home season | Python, SQL, Power BI

Independent demonstration project. Not affiliated with or endorsed by the Phoenix Suns.
This report uses a simulated dataset designed to reflect realistic sports business scenarios
and to demonstrate an analytical approach. It does not describe actual team performance.

Executive Summary

How a professional basketball organization could use fan, ticketing, attendance, marketing, and sponsorship data to improve revenue, retention, and engagement. Built on a simulated 41 game home season.

\$64.1M Total ticket revenue	\$107 Average ticket price	85.9% Sell-through rate	83.3% Attendance rate
56.0% Repeat purchase rate	50.4% Fan retention rate	3.9% Campaign conversion	6.7M Sponsor engagements

Key insights

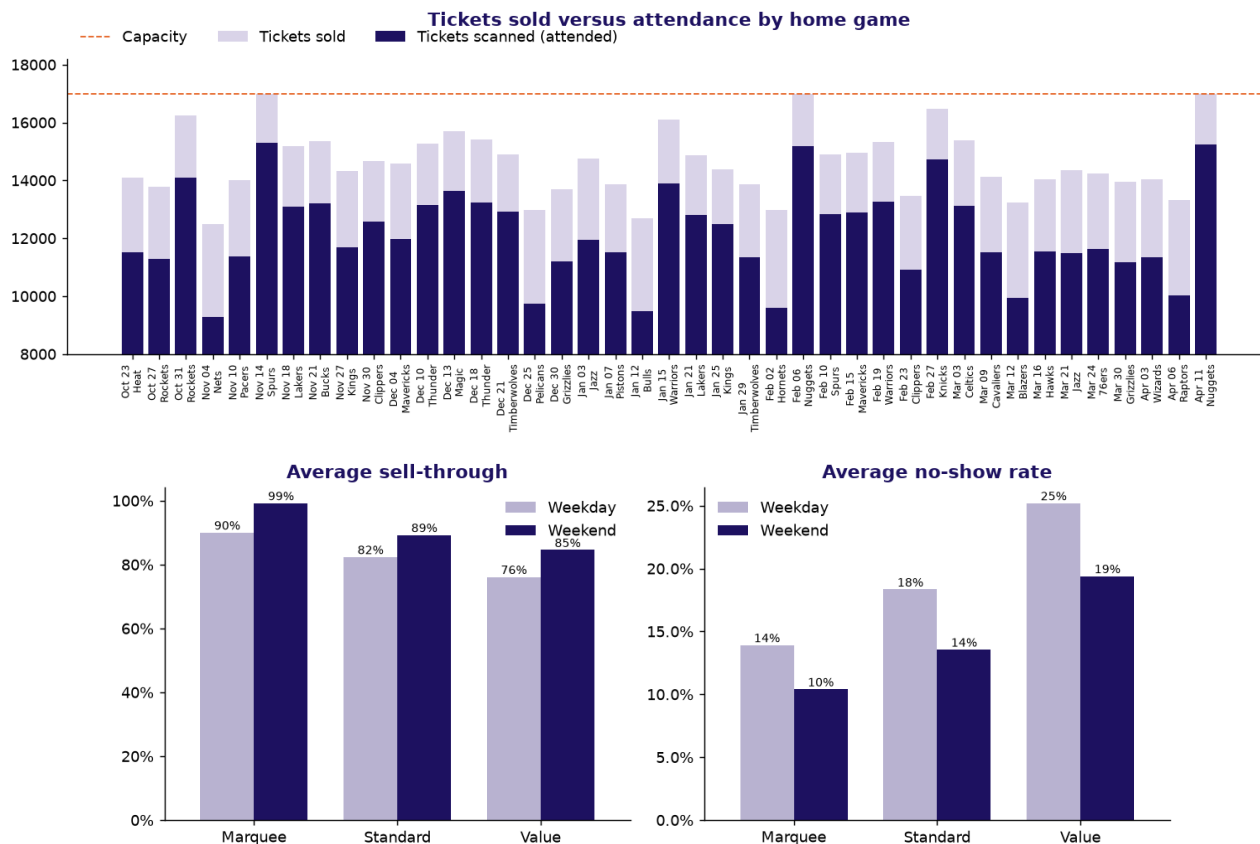

- Sell-through averaged 85.9% but ranged from 73% to 100%. 8 soft games hold 32% of all unsold seats, and 100% of them are weekday games.
- 16.7% of tickets sold were never scanned. No-shows run 18.6% on weekdays against 13.9% on weekends.
- 6,471 repeat buyers went quiet in the final 60 days. They average \$860 per fan, more than active repeat attendees (\$684).
- 5,799 non members bought five or more separate games at single game prices, averaging 2.6 seats at \$118 per seat.
- Email, SMS, and push returned 12.9x on cost against 0.7x for paid media. Upsell was the best campaign type at 15.0x ROI.

Main recommendations

- **Retarget at-risk and first-time buyers with post-game offers.** Recovering 15% of at-risk value is worth about \$834,876. A repeat attendee averages \$684 against \$280 for a first-time buyer.
- **Bundle weekday games to lift sell-through.** Selling 25% of 31,155 unsold seats at a 20% discount is worth about \$589,278.
- **Upsell high-frequency fans into plans and premium products.** 10% take-up adding 3 games each is worth about \$536,092.
- **Focus campaigns on high-conversion segments and owned channels.** Owned channels returned 12.9x against 0.7x for paid media. Best campaign: App Flash Sale at 21.7x.

Ticketing & Attendance Insights

Revenue trends, tickets sold versus attendance, the opponent and day of week effect, and no-shows.

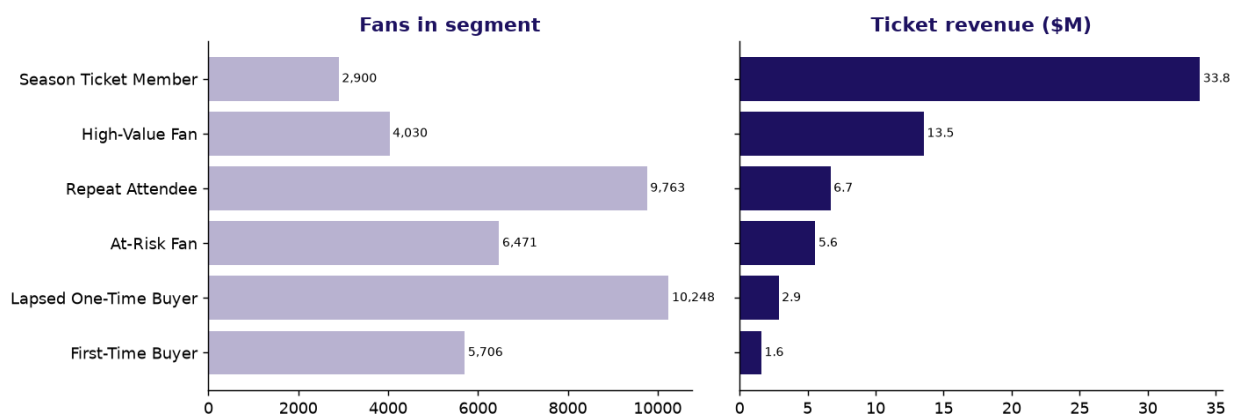

What the data shows

- **Opponent and day of week drive demand.** Marquee weekend games average 99% sell-through. Value weekday games average 76%.
- **Sold is not the same as attended.** 16.7% of tickets sold were never scanned, 18.6% on weekdays against 13.9% on weekends.
- **The weak spots are predictable.** 8 games hold 32% of unsold seats. The lowest five by sell-through:

Date	Opponent	Day	Sell-through	Unsold	No-show
Nov 04	Brooklyn Nets	Tuesday	73.4%	4,516	25.5%
Jan 12	Chicago Bulls	Monday	74.7%	4,295	25.3%
Feb 02	Charlotte Hornets	Monday	76.3%	4,027	25.9%
Dec 25	New Orleans Pelicans	Thursday	76.3%	4,023	25.1%
Mar 12	Portland Trail Blazers	Thursday	77.8%	3,767	24.8%

Fan Behavior & Segmentation

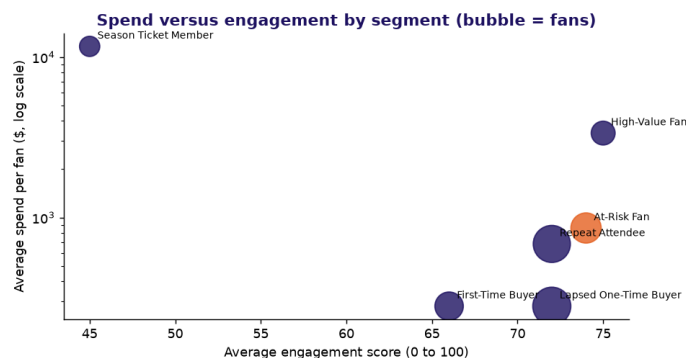

Every fan is scored on recency, frequency, and monetary value, plus an engagement score built from attendance and campaign response. Rules then assign one segment per fan.

Segment	Fans	Revenue	Share	Avg spend	Avg games	Engagement
Season Ticket Member	2,900	\$33.8M	52.8%	\$11,667	41.0	45
High-Value Fan	4,030	\$13.5M	21.1%	\$3,360	8.6	75
Repeat Attendee	9,763	\$6.7M	10.4%	\$684	3.3	72
At-Risk Fan	6,471	\$5.6M	8.7%	\$860	3.0	74
Lapsed One-Time Buyer	10,248	\$2.9M	4.5%	\$280	1.0	72
First-Time Buyer	5,706	\$1.6M	2.5%	\$280	1.0	66

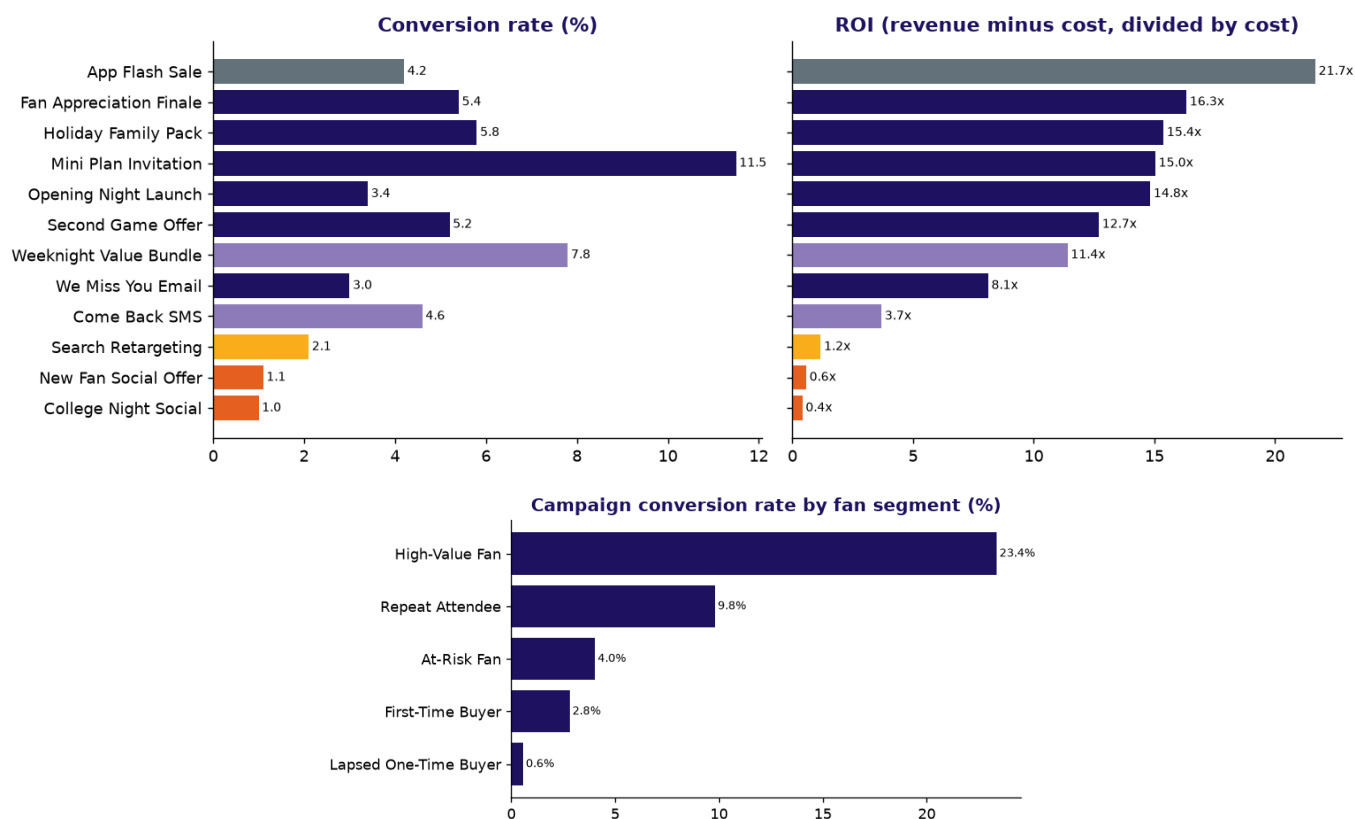

What the data shows

- **Best fans.** Season ticket members generate 53% of ticket revenue. High-value fans are the strongest non member group.
- **At risk.** 6,471 repeat buyers went quiet in the final 60 days. They average \$860 per fan, more than active repeat attendees (\$684).
- **Ready for more.** 5,799 non members bought five or more separate games at single game prices, averaging 2.6 seats at \$118 per seat.
- **Retention.** 56% of non member buyers purchased more than once, and 50% of first half buyers came back in the second half.

Marketing & Conversion

Twelve campaigns across email, SMS, push, paid social, and paid search, measured on response, conversion, revenue, and ROI.

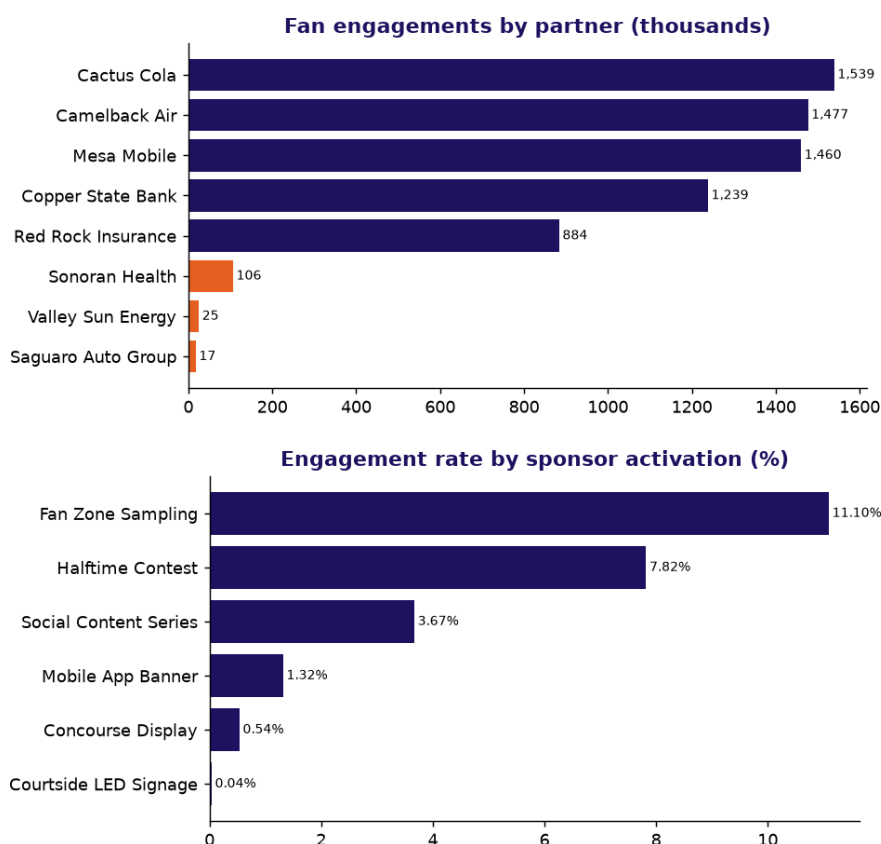

Campaign type	Campaigns	Conversion	Cost	Revenue	ROI
Upsell	1	11.5%	\$7,000	\$112,280	15.0x
Retention	2	5.3%	\$25,000	\$393,299	14.7x
Promotion	3	5.7%	\$34,000	\$534,818	14.7x
Win-Back	2	3.5%	\$19,000	\$128,813	5.8x
Acquisition	4	1.8%	\$96,500	\$280,166	1.9x

What the data shows

- **Owned channels win.** Email, SMS, and push returned 12.9x on cost against 0.7x for paid media. App Flash Sale was the best campaign at 21.7x.
- **Target by segment.** The High-Value Fan segment converts at 23.4% and Repeat Attendee at 9.8%, far above cold audiences.
- **Caveat.** Attribution is last-touch. It ranks campaigns and does not prove incremental lift. A holdout test would be the next step.

Sponsorship & Commercial Insights

Eight partners (fictional names) across six activation types, measured on reach, engagement, and estimated partner value.

Activation	Partners	Impressions	Engagements	Eng rate	Est. value
Fan Zone Sampling	2	0.2M	24,510	11.10%	\$18,537
Halftime Contest	3	0.7M	52,853	7.82%	\$44,197
Social Content Series	5	173.7M	6,374,158	3.67%	\$3.8M
Mobile App Banner	2	11.3M	149,169	1.32%	\$131,326
Concourse Display	2	0.8M	4,297	0.54%	\$6,326
Courtside LED Signage	6	375.2M	141,939	0.04%	\$4.6M

What the data shows

- **Interactive beats passive.** Fan Zone Sampling engages 11.1% of the fans it reaches against 0.04% for Courtside LED Signage.
- **Partner spread is wide.** Cactus Cola leads with 1.5M engagements. Saguaro Auto Group and Valley Sun Energy trail because their packages are signage and displays only.
- **Cross-promotion.** In-arena activations scale with scanned attendance, so reducing no-shows on soft games also lifts partner delivery. Total estimated partner value: \$8.5M.

Strategic Recommendations

Six practical actions, each tied to a finding. Sizing figures are scenarios built from observed averages and stated assumptions, not forecasts.

#	Action	What to do	Sizing
1	Retarget at-risk and first-time buyers with post-game offers	Win-back offers to 6,471 at-risk fans, highest spenders first, and a second game offer within 14 days for 5,706 first-time buyers.	Recovering 15% of at-risk value is worth about \$834,876. A repeat attendee averages \$684 against \$280 for a first-time buyer.
2	Bundle weekday games to lift sell-through	Weeknight bundles, group offers, and theme nights on the 8 games with the weakest demand.	Selling 25% of 31,155 unsold seats at a 20% discount is worth about \$589,278.
3	Upsell high-frequency fans into plans and premium products	Mini plan and premium seating offers to 5,799 non members who already buy five or more games.	10% take-up adding 3 games each is worth about \$536,092.
4	Focus campaigns on high-conversion segments and owned channels	Prioritize the High-Value Fan segment, which converts at 23.4%, and move part of the \$88,000 paid media budget into email, SMS, and push.	Owned channels returned 12.9x against 0.7x for paid media. Best campaign: App Flash Sale at 21.7x.
5	Strengthen sponsor activations tied to high-engagement environments	Add interactive activations for Saguro Auto Group and Valley Sun Energy, the two partners with the lowest engagement. Both rely on signage and displays only.	Fan Zone Sampling engages 11.1% of the fans it reaches against 0.04% for Courtside LED Signage.
6	Monitor sold versus scanned gaps to reduce no-shows	Weekly sold versus scanned report by game, plus ticket exchange and outreach for 1,192 season ticket accounts using under 75% of their tickets.	Those accounts hold \$13.87M of ticket revenue. Weekday no-shows run 18.6% against 13.9% on weekends.

Implementation roadmap

Phase	Focus	Actions
Days 1 to 30	Quick wins on owned channels	Launch at-risk win-back and second game offers. Stand up the sold versus scanned report by game.
Days 31 to 60	Product and pricing	Pilot weekday bundles on the softest games. Send plan and premium offers to frequent buyers.
Days 61 to 90	Renewals and partners	Start usage outreach to low usage season ticket accounts. Add interactive activations to the weakest partner packages.

Method and data

This project uses a simulated dataset designed to reflect realistic sports business scenarios and to demonstrate an analytical approach. The schedule is illustrative and no figure describes actual Phoenix Suns performance. Pipeline: Python and SQL for data generation, cleaning, validation, segmentation, and analysis. Power BI for the dashboard.
